

Innovative medical technique

With the innovation of this new medical technique, we have significantly succeeded in expanding the possibilities of treating many diseases.

EHP[®] is characterized by high efficacy and minimal side effects. It allows for short term treatment plans, previously lasting for up to months without EHP[®].

EHP[®] is a highly effective medical technique in treatment of:

Chronic Fatigue Syndrome

Long COVID-Syndrome

Lyme disease

Heavy metal pollution

Sepsis

Cancer
(breast, prostate, pancreatic cancers etc.)

Rheumatic diseases
(arthritis, osteoarthritis, gout, etc.)

Autoimmune diseases
(e.g. multiple sclerosis, Crohn's disease, ulcerative colitis, Hashimoto's thyroiditis)

Health
is our **PASSION**

WHAT IS EHP®

The „**Extracorporeal Hemoperfusion**“ - EHP® is a globally new and unique multimodal therapy procedure, which we present to the wider public for the first time after several years of research and development.

Hemoperfusion is an extracorporeal blood purification done through the passage of blood over sorbent agents for removal of harmful products considered to produce diseases. EHP® is designed for removal of inflammatory mediators and elimination of toxins such as chemical toxins (endogenous or exogenous), immune toxins, or other naturally occurring biochemical substances.

MECHANISM OVERVIEW

In EHP®, consists of the passage of anticoagulated whole blood through a device, usually a column, that contains adsorbent particles.

Harmful & inflammatory substances bind to the particles in the adsorber and are removed as blood exits the column.

EHP® could be combined with :

- **Hyperthermia:** artificial healing fever
The temperature will be elevated safely from 39.0°C up to 42.0°C.

and / or

- **Oxygenation:** increase blood oxygen level.

Hyperthermia

**Hemoperfusion
(Apheresis)**

Oxygenation

EHP® as a potential therapeutic option for patients with severe/Long COVID- Syndrome:

COVID-19 infection is accompanied by an aggressive inflammatory response with the release of a large amount of pro-inflammatory cytokines in an event known as “cytokine storm.” The host immune response to the SARS-CoV-2 virus is hyperactive resulting in an excessive inflammatory reaction. Several studies analyzing cytokine profiles from COVID-19 patients suggested that the cytokine storm correlated directly with lung injury, multi-organ failure, and unfavorable prognosis of severe COVID-19

EHP® therapy is a promising adjunctive treatment, designed for elimination of these toxins and removal of inflammatory mediators.

So EHP® is very well indicated to treat Long COVID-Syndrome.
